DETAILED ACTION

1. This Office Action is responsive to the communication filed on 4/13/2004
2. Claims 1-18 are pending for examination.

Priority

3. Acknowledgment is made of applicant's claim for foreign priority under 35 U.S.C. 119(a)-(d).

Information Disclosure Statement

4. The information disclosure statement (IDS) submitted on 4/13/2004 and 3/14/2005 were considered by the examiner.

Allowable Subject Matter

5. Claims 1-18 are allowed.
6. The following is an examiner's statement of reasons for allowance:

The present invention is directed to a portable computer, in particular to a portable computer using a fuel cell which can be refueled anytime, thereby efficiently supplying power to the portable computer. Specifically, application has claimed uniquely distinct features in the instant invention which not found in the prior art either singularly or in combination.

a signal sensor sensing an external fuel supplying signal from the primary fuel valve; and a controller controlling the portable computer to operate in the maximum performance mode based on the sensed external fuel supplying signal.

The prior art, Ozeki US 20040219414 teaches another portable computer comprising a first fuel cell for generating first electric power, a second fuel cell for generating second electric power less than the first electric power, and a switching circuit coupled to the first fuel cell and the second fuel cell for selecting one of the first and second fuel cells wherein the switching circuit responsive to signals from the electronic device indicative of power demand for controlling the switching circuit.

Hayashi et al. U.S. Patent No. 6,910,138 teach another method relates to a computer system comprising a means for determining whether a power supply is a fuel cell assembly or an AC adapter wherein, when it is determined that the power supply is a fuel cell assembly, switching the operation mode of the computer to a fuel cell assembly mode in which the computer system is operating in a low power consumption mode.

Becerra et al. US 20050014041 teach another system relates to fuel cells and more particularly, to a management system for a fuel cell in a wide array of consumer electronics. Specifically, Becerra et al. teach a method for effectively and efficiently managing refueling and fuel delivery in a fuel cell system wherein the system comprising means to sense, calculate, or record information, such as the volume of remaining fuel canister or cartridge; and means to determine when the fuel canister or cartridge needs to be refilled and can control the refilling operations.

The above prior art, either singularly or in combination, fail to anticipate or render the present invention obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
